

California / U.S. West Coast Fuels Regulatory Compliance

Weaver's Energy Compliance Services practice is dedicated to helping businesses navigate compliance with evolving environmental regulations. In addition to federal requirements governed by the U.S. Environmental Protection Agency (EPA), state agencies are increasingly becoming more active in regulating transportation fuel quality and carbon content, with California leading the way. We help companies of all sizes understand the regulatory requirements, maintain compliance and identify and maximize benefits that might be available under applicable programs.

Common services offered include:

- ▶ Advisory services related to the California Air Resources Board (CARB) regulations
 - ▶ California Low Carbon Fuel Standard Program (LCFS)
 - ▶ Greenhouse gas reporting
 - ▶ Cap and trade
 - ▶ Motor vehicle, gasoline and diesel regulations (including the alternative diesel fuels)
- ▶ Registration of renewable fuel producers under LCFS
- ▶ Preparing fuel/carbon intensity pathways for renewable fuels entered into California
- ▶ Determining annual obligations under the LCFS and cap and trade programs
- ▶ Assisting with LCFS quarterly and annual reports
- ▶ Due diligence assessments and audits of renewable fuel producers, importers and LCFS credit generators
- ▶ Preparing annual greenhouse gas reports and related monitoring plans
- ▶ Assisting with registering companies with the Compliance Instrument Tracking Services System (CITSS) under California's cap and trade program
- ▶ Registration, reporting and related advisory services for other West Coast fuels and carbon programs, including the Oregon Clean Fuels Program
